

Environmentally Friendly Approved Products

In our ongoing efforts to become more environmentally responsive, PGM has developed a list of products that are environmentally friendly (either toxic free or low toxicity) that are to be used on your vessels.

The following expanded list will be used by all vessels under PGM management for requisitioning products for the services described. You will note that in most cases there are alternatives that can be chosen at your discretion. Should you discover a product that is either less toxic, or a better product at equal toxicity, please feel free to request their inclusion on this list.

No product shall be requisitioned that is not on this list for the services described. Ordering of products other than those listed without prior approval will result in your requisition being changed and the potential for disciplinary action to follow if there are repeated offences.
